## 1. President's Message

Dear EAPM members,

We look back with great pleasure on the very successful EAPM meeting in Verona. This conference was not only the largest EAPM meeting since the founding of the society, but also a special scientific and cultural highlight. Conference president Mirella Ruggeri and her team have put together an excellent scientific program and organized the meeting excellently (see the more detailed report of the meeting in this newsletter).

The growth of the number of participants in the annual conferences is an expression of the growing organization and the increased degree of networking of the organization. EAPM is involved in European scientific initiatives such as EURONET-SOMA (we reported on it in our last newsletter) and CARD. The latter is a network of researchers in the field of cardiology and psychosomatics, which has recently submitted a request for funding from the European Union.

At the Verona Conference we held our annual General Assembly.

At this assembly the Executive Council was elected according to our bylaws.

Executive Board member Jordi Blanch (Spain/Catalonia) succeeded Dan Dumitrascu as the secretary of the association and Executive Board member Franziska Geiser (Germany) succeeded Marta Novak as deputy treasurer.

Also Silvia Ferrari (Italy) left the Executive Board after long years of commitment to the EAPM.

We would like to express our thanks to the three long-standing members of the Executive Board Marta Novak (Hungary), Silvia Ferrari (Italy) and Dan Dumitrascu (Romania) for their engagement. They have been deeply committed to the EAPM since its foundation in 2012. The newly elected members of the Executive Council are Adriana Baban from Cluj/Romania and Per Fink from Aarhus/Denmark.

Meanwhile, the preparations for the next annual EAPM meeting are in full swing. The venue for the meeting will be Rotterdam in the Netherlands. Rotterdam is a modern city that, in addition to the traditional focus on industry and commerce, has a rich cultural diversity.

Best wishes and see you next year in Rotterdam,

Wolfgang Söllner (EAPM President)

[back to top](#)

## 2. New EAPM Board members

**New members of the Executive Council are Adriana Baban from Romania and Per Fink from Denmark:**

**Adriana Baban is Professor of Health Psychology and Behavioural Medicine at Babes-Bolyai University, Cluj-Napoca, Romania.** She has extensive experience in applied research in the field of social and behavioural dimensions of health in Central and Eastern Europe. A consistent focus of her work is addressing women's reproductive health, vaccine hesitancy, adverse childhood experiences and how abuse is related to risk factors for health. Prof. Baban has been an International Consultant for UNICEF, Doctor of the World, WHO, European Centre for Disease Control, and visiting professor at department of Community Health Sciences, UCLA, Los Angeles, USA. She has published more than 100 papers, books and chapters. She was awarded with the title of Fellow of European Society of Health Psychology for outstanding contributions to the development of Health Psychology in Europe.

**Per Fink, MD, PhD, DMSc** – Per Fink graduated in medicine from Aarhus University of Aarhus, Denmark, in 1983. After his basic clinical education in surgery, internal medicine and neurology, he trained in psychiatry and became a specialist in psychiatry, and has worked in different branches of psychiatry. He has an authorization in dynamic psychotherapy and cognitive psychotherapy and basic training in group therapy and ACT therapy. In 1993, he became a PhD based on the dissertation 'Psychiatric and somatic comorbidity'. In 1996, he became an authorized psychiatrist and in 1997 a Doctor of Medical Science based on a doctoral dissertation entitled 'Persistent Somatization'. In 2000, he became an Associate Professor and in 2010 an ordinary Professor of Functional disorders. He is an associated editor of the Psychosomatic Medicine and Journal of Psychosomatic Research. In 1999, Per Fink started The Research Clinic for Functional Disorders at Aarhus University Hospital; a clinic with an interdisciplinary approach to functional disorders. The department is first and foremost a research clinic focusing on research in functional disorders as well as on developing new treatment programmes for patients with functional disorders. A primary focus during the years has been primary care. In close cooperation with the Research Unit for General Practice at the Aarhus University, a treatment programme for GPs has been developed. The purpose of the programme is to teach GPs how to handle patients with functional disorders in general practice. This programme is now also a compulsory part of the specialist training for GPs in the Western part of Denmark.

Another area of special focus is classification, and he has developed research criteria for both Bodily Distress Syndrome and Health Anxiety. The Research Clinic for Functional Disorders and Psychosomatics currently has 40 employees of which about half are working clinically, the other half with research. The clinic treats patients with functional disorders, including functional somatic syndromes and health anxiety and receives patients from all over Denmark. Per Fink has vast experience with teaching at all levels as well as an extensive publication list primarily with focus on somatisation or functional disorders.

### [3.Looking Back: Verona Conference: 6<sup>th</sup>Congress of the European Association of Psychosomatic Medicine](#)

**CONGRESS REPORT**  
written by *Mirella Ruggeri*

*Verona, June 27-30, 2018*

*The 6th Congress of the European Association of Psychosomatic Medicine has been held in Verona from 27 to 30 June 2018, focussed the theme **INNOVATIVE AND INTEGRATED APPROACHES TO PROMOTE MENTAL AND PHYSICAL HEALTH**. It has been promoted jointly by EAPM, the University of Verona and the Verona Hospital Trust and has been held under the Patronage of the European Psychiatric Association (EPA), the International College Of Psychosomatic Medicine (ICPM) and the Italian Association of Consultation Liaison Psychiatry. It has been an event of great relevance not only for Psychiatry and Psychosomatic Medicine, but also for all specializations in medicine. It has attracted more than 600 participants from 45 countries.*

*Several critical issues on physical and mental illness interaction have been proposed during the conference, starting from the awareness that they share common risk factors with effects that are not only additive but also synergistic. Comorbidity is a complex event due to its numerous clinical and socio-environmental implications. About 25% of patients with chronic illness also suffer from mental disorders, and higher rates of comorbidity are also found for specific conditions (eg cancer and neurological disorders). Doctors tend to focus on symptoms and organs, underestimating the importance of mental health problems, especially when they accompany severe physical illness. This is largely related to the belief that mental health problems, such as simple corollaries of the main disease, are destined to disappear with the improvement of physical illness. On the other hand, psychiatrists, psychologists and practitioners working in mental health in general may be just as reluctant to deal with the medical comorbidities in their patients.*

*This is why it is important to make it clear to all healthcare administrators that there is a real "imperative" both economic and moral to foster innovation and integration of approaches aimed at promoting both physical and mental health. Data from economic models show that there are "avoidable" costs (in some cases up to 30-40% of health costs) resulting from excessive or inappropriate use of resources, decreased productivity, disability, and reduction of quality of life. Putting a holistic model into practice not only reduces these costs but also brings important benefits for psychophysical wellbeing: we are therefore faced with a situation where the advantage would be threefold: they reduce costs, increase psychological well-being and improve organic disease - that is that Americans call a "win win win" situation. Unfortunately rarely applied in practice, so far!*

*The theme of the interface between physical and mental health is absolutely one of the future priorities in health management for the entire population, which is extremely crucial and important, also because there have been important transformations in the needs of health care in recent decades. Today, the changed spectrum of health conditions (eg, multimorbidity, chronicity and aging) sometimes proves the inadequacies of a traditional medical care, approach which traditionally has been mainly focussed on the diagnosis and treatment of each disease separately. The aim of treatment should be instead the identification of all modifiable biological and non-biological factors and the achievement of individual goals, in the context of the bio-psycho-social approach. This approach appears fundamental both at the onset of a disease and in the context of chronic or multi-problem diseases.*

*The focus on the well-being of health workers has also been central to this conference. Medical and nursing staff working in hospitals experience high levels of psychological stress and burnout vulnerability through exposure to adverse clinical situations and organizational threats and challenges. Today there are interventions of proven effectiveness that can improve the well-being of hospital staff. Communication skills are now recognized as one of the basic clinical skills. Communication is particularly stressful for doctors who need to communicate bad news, inform patients about highly complex treatment procedures and request informed consent. Some studies indicate that doctors report that this stress lasts beyond the interaction. Doctors and nurses would be required to personalize information based on the needs and sensitivity of each patient, but professional communication is not learned spontaneously during the clinical career.*

*Several presentations have covered a variety of topics ranging from psycho-oncology, to communication techniques, to the impact of social and economic factors on organic diseases, to psychological approaches to pain management, to the reduction of patients' suffering in the phases following surgery and transplantation, psychosomatic aspects in cardiology, gastroenterology, dermatology and much more.*

***This Conference has got impressive numbers: Over 600 professionals from the medical and psychiatric area have taken part, including world-leading experts from 45 different countries around the world. The scientific program of the Verona EAPM 2018 Congress has consisted of 519 presentations including 17 plenary lectures, 39 symposia, 223 oral presentations, 210 poster presentations, 10 Master classes and workshops, and several Special Interest Group meetings.***

*The Congress has begun on June 27 with a **Preconference on Psycho-Oncology** on the theme: **Challenges And Opportunities In Psycho-Oncology: Screening, Assessment And Treatment In Clinical Care** organized jointly with the Canadian Academy of Psycho-Somatic Medicine, the International Psycho-Oncology Society (IPOS) and the World Psychiatric Association's section on Psycho-Oncology and Palliative Care.*

*A **Special Lecture** at the end of the day has been held by Professor Mario Maj, former President of the World Health Organization, on the theme: **21st Century Psychiatry: Acknowledging Complexity While Avoiding Defeatism. The Location of the Special Lecture** was of historical interest in itself: the University Building of Santa Marta, is a huge complex of military architecture, originally used for the production and storage of bread, grain and other troop rations. A permanent exhibition in the former bakery covers the history of the building and its relations with the city, with the further dimension of how soldiers were fed.*

*Further, during the three congress days, nine plenary lectures have covered issues related to:*

- *Making An Economic Case For Innovative And Integrated Approaches To Promote Mental And Physical Healthcare (David Mc Daid - London School of Economics, London, UK)*
- *The Future Of The Bio-Psycho-Social Model In The Age Of Systems Medicine (Peter Henningsen, Dean, TUM School of Medicine, Munich, Germany)*
- *The Clinical Role Of Psychosomatic Medicine (Giovanni A. Fava, University of Bologna, Bologna, Italy, and State University of New York at Buffalo, United States)*
- *Physical And Mental Health In Chronic Illness (Graham Thornicroft, King's College London, United Kingdom)*
- *Patients In Context: A Call For A Comprehensive Understanding Of The Medically Ill (Friedrich Stiefel, University Hospital Lausanne, Switzerland)*
- *Group Interventions To Support Health Care Providers (Molyn Leszcz, University of Toronto, Sinai Health System; President-Elect, American Group Psychotherapy Association, Canada).*
- *This year's Alison Creed Award Winner Professor Arthur J. Barsky (Harvard School of Medicine, Boston, USA) has given a lecture on Somatization: A Construct In Need Of Reexamination.*
- *Frits Huysse, from the Vrije Universiteit Medical Center Amsterdam has given a Lecture on the issue Is There Life After Retirement? From Velasquez To Sheeler!*
- *And finally, Raphael Herr (Mannheim, Germany) – recipient of the Young Researcher Award sponsored by Elsevier - has given a lecture based on his research on Longitudinal effects and mediators of psychosocial work characteristics on somatic symptoms.*

*Furthermore, 5 Mastclasses have been tough, with 123 participants attending:*

- The Carus Master Class on **Trauma-Informed Care Interventions** held by Clare Pain (MD, Associate Professor, Department of Psychiatry, University of Toronto; Canada) has addressed the impact of trauma, and the identification and management of patients suffering from symptoms and problems as a result of unresolved traumatic experiences. Clinical examples, demonstrations of techniques and strategies for working with trauma survivors has brought the theoretical material to life and illustrate the applied principles in practice.
- The Carus Master Class on **Group Interventions For Staff** held by Melyn Leszcz (University of Toronto, Sinai Health System; President- Elect, American Group Psychotherapy Association) has addressed the theory and practice of interventions that have impacted staff resilience, improved coping and adaptation, improvement of mental health literacy, reducing mental health stigma, managing stress and supported psychological safety in the workplace. Applications from micro levels with regard to group interventions for staff to macro levels with regard to hospital culture have been illustrated.
- The aim of the Carus Master Class on **Research Methods And Targets of Psychosomatic Research** held by Giovanni Andrea Fava (Department of Psychology, University of Bologna, Italy and Department of Psychiatry, State University of New York at Buffalo) was to discuss the main critical issues that are concerned with psychosomatic research, based on the lecturer's extensive experience with Psychotherapy and Psychosomatics. Various issues have been covered, such as: development of a psychosomatic hypothesis; formulation of a research protocol; choice of assessment instruments, with particular reference to clinimetric principles and the Diagnostic Criteria for Psychosomatic Research; writing the manuscript and submission of the paper to a journal.
- In the Carus Master Class on **Physical And Mental Health In Chronic Illness** held by Professor Sir Graham Thornicroft (Institute of Psychiatry, Psychology and Neuroscience, King's College London, UK) issues such as the co-occurrence of mental and physical ill health, the concept of syndemics, evidence of premature mortality among people with mental illness, and the evidence of neglect of physical health problems among people with mental illness, and the contributions of stigma towards these problems were addressed. The participants of the Master Class discussed actions that are needed at the clinical level to address such disparities and, particularly, models of integrated care.
- The recipient of the Alison Creed Award, Arthur J. Barsky (Harvard Medical School Boston, USA) gave a Master Class on **Conducting Randomized, Controlled Intervention Trials In Psychosomatic Medicine**. In this session, the design and the statistical analyses of randomized-controlled trials conducted in patients with somatic symptom disorders were used to discuss critical issues of trials in psychosomatic medicine

An evaluation sheet was administered at the end of the Master classes and proved that - on a scale ranging from 1 (worst); to 5 (best) - 64% of the attenders assigned to the speakers the score of 5, 31,7% the score of 4, with negligible percentages in the range of 2 and 3. Concerning the topics of the Masterclasses, 58,5% was rated 5, 30,9% 4, and only 7.3% was rated 3. Usefulness of information for current and future research was rated as best (5) by 48% of participants, and 4 by 34%. Usefulness of information for clinical work was rated as best (5) by 38,2%, 4 by 32% and 3 by 19%. Usefulness of information for professional development was rated as best (5) by 50,4% of participants, 4 by 40% and 3 by 11%. Finally, the overall ratings of the master classes was rated as best (5) by 50,% of participants, 4 by 40% and 3 by 6.5%.

Being in Italy and especially in Verona means also having many occasions to enjoy music and art.

The **FÖOV DANCE COMPANY**, a Lucia Miriam Salgarollo choreographer's working and research group in Verona, gave performances at the opening and closing ceremonies of the conference presenting parts of the ballet "Body and Mind: from Chaos to Harmony" from "The Merchant of Venice" by Shakespeare.

**MARIO CHIARINI**,

a marvellous tenor, sung opera arias to open the

plenary sessions and to close the conference. Mario Chiarini was born in Verona in 1980, son of art, also his father was a tenor, a pupil of Mario Del Monaco. He graduated in lyric singing at the Conservatory of Mantua and has performed in numerous opera concerts. In addition to his activity as an opera singer he also works as a choir director. But he is also a professional in the area of mental health, as he also graduated in Educational Sciences at the University of Verona.

Over 200 congress participants have attended the **Gala Dinner at the Giardino Giusti**, a garden that is considered one of the finest examples of an Italian garden and is one of the city's marvels. It belongs to the Giusti family and was designed in the 16th century containing age-old trees, gargoyles, fountains, grottoes (which echo strangely) and ancient inscriptions all immersed in a carefully landscaped setting which take advantage of the various levels of the terrain. The garden has been visited throughout the centuries by famous tourists such as Goethe and Mozart.

In conclusion, we wish that this Conference - that has received so much attention and engagement by scientists and clinicians around the world – might not only be a highly fruitful experience, but also a fundamental occasion to activate an open debate and to encourage collaboration aimed to increasing integration and innovation in the field of Psychosomatic Medicine and also in the overall field of Mental Health, to the benefit of the population's health and wellbeing. Finally, my co-workers and I do hope that all participants have enjoyed our beautiful country and our marvellous city, its ancient monuments, romantic landscapes, nice weather, good wine and food and...more!

We wish to express our gratitude to

- the Members of the International Scientific Committee for the cooperative work, the availability and the excellent work done in the assessment of abstracts;
- the Members of the Program Committee who gave continuous support and fundamental advice, always ready to help;
- the Carus Master Class Committee, that has organised an excellent compilation of innovative Master classes;
- the Travel Award Committee, that has favoured a good selection of the applications of our young researchers;
- the National and Local Scientific Committees – especially Chiara, Doriana, Sarah, Michela - key persons that worked very hard to implement a good quality program;
- the COGEST Organizing Secretariat that have assisted me with dedication, competence, rigour, creativity, strong engagement and pleasant manners;
- the EAPM Administrator, Isabel Winter, who with patience and skilled knowledge has always found the correct answer to our questions;
- the EAPM president, Wolfgang Söllner, a gentle “Maestro”, from whom I have learned a lot in these last months.

Mirella Ruggeri, Congress President

#### [4. JPR: The Editor's choice September 2018](#)

Written by Jess Fiedorowicz, Editor of the Journal of Psychosomatic Research

[referring to the Article title:](#)

Predictors of pain, urinary symptoms and quality of life in patients with chronic pelvic pain syndrome (CPPS): A prospective 12-month follow-up study  
by Christoph Dybowski, Bernd Löwe, Christian Brünahl  
JPR, Vol. 112, p99-106

**Editor's Commentary:**

Chronic Pelvic Pain Syndrome (CPPS) is often associated with a substantial loss in quality of life (QoL). While cross-sectional studies show strong associations of CPPS with psychological factors, longitudinal studies are rare. This study examined psychological variables, pain, urinary symptoms and impediments to QoL in 109 female and male patients during and 12 months after visiting a specialized outpatient clinic. The higher depressive-anxious symptoms were initially, the higher were pain, urinary symptoms and impediments to QoL after 12 months. Furthermore, impediments to QoL after 12 months were only predicted by initial depressive-anxious symptoms, but neither by pain nor by urinary symptoms.

#### [5. Implementation of a sub-specialty in psychosomatic medicine in Austria](#)

written by Christian Fazekas & Christoph Pieh

At the beginning of the year 2018 a sub-specialty in psychosomatic medicine has been established in Austria. It was termed “specialisation in specialty-related psychosomatic medicine”. The novel sub-specialty can be acquired by general practitioners and medical specialists of all clinical fields. Thus, a structured integration of psychosomatic medicine

in all medical fields is prepared and formally achieved. This development is complementing the well-established "PSY-Curricula" which are part of continuing medical education (CME) in Austria since more than 25 years.

Henceforward, there are two ways to acquire psychosomatic competence in Austria: by attending the PSY-Curricula level one and level two, thus receiving a Diploma for Psychosocial Medicine and a Diploma for Psychosomatic Medicine; or by the novel sub-specialty. In contrast to the Austrian PSY-Curricula for Psychosocial Medicine and Psychosomatic Medicine, training for this sub-specialty will primarily take place in the hospital in the respective field of one's own medical expertise. After 18 months of providing psychosomatic care in a specialised unit participants graduate with a Diploma for specialty-related Psychosomatic Medicine. Both approaches to psychosomatic competence are regarded as equivalent prerequisites to enter level three of the PSY-Curricula. This level offers training for psychotherapeutic medicine and requires a further three years of training before graduation.

The PSY-Curricula have attracted approximately 10% of medical doctors. A few studies also investigated aspects of effectiveness of this programme and reported several positive results (Fazekas and Leitner 2012). Nevertheless, in the last years it was increasingly questioned if there was adequate care for patients in need of psychosomatic medicine. A proposal to introduce a sub-specialty in psychosomatic medicine to facilitate quality assurance was developed under the guidance of the Austrian Society of Psychosomatics and Psychotherapeutic Medicine. This proposal turned out to receive considerable support by health care experts of different medical disciplines (Leitner et al. 2013). After a comprehensive and constructive discussion among all associated medical societies, the Austrian Medical Chamber decided to establish this novel specialisation to strengthen integration of the biopsychosocial factor within medical specialties, to foster interdisciplinary cooperation, and to help improve psychosomatic care in Austria (Fava et al. 2012).

## 7. 15% book discount for EAPM members

**The American Psychiatric Association Publishing Textbook of Psychosomatic Medicine and Consultation-Liaison Psychiatry, Third Edition, Edited by James L. Levenson, M.D.**

**ISBN: 9781615371365, £141.00, Cloth, 1410 pages.**

Dear EAPM members,

we are delighted to offer you a special discount for members of the European Association of Psychosomatic Medicine at the UK distributors, NBNI, in Plymouth, UK.

Members of our association are entitled to 15% discount on **The American Psychiatric**

## How you get the discount?

When ordering they will need to quote the code: **EAPM1518**

This book, and all other APA Publishing titles are available to order in Europe from the APA Publishing website, by selecting the 'Buy in Europe' option:

<https://www.appi.org/>

Alternatively orders can be placed directly with NBNi:

Email: [NBNi.Orders@ingramcontent.com](mailto:NBNi.Orders@ingramcontent.com)

Phone: +44 (0) 1752 202301

Mail: Orders Department, NBN International, 10 Thornbury Road, Plymouth, PL6 7PP, United Kingdom Postage & packing Within the UK: £4.00 for first book and £1.00 per additional title up to a maximum value of £10.00.

Mainland Europe, International Mail, £6.00 for the first book and £1.50 per additional title.

For European Courier rates please contact NBN International (details above).
